THE W.R.H. IS A FIRST-CLASS EXPORT ADVERTISING MEDIUM:

● for manufactures of receiving, television, recording and transmitting equipments, measuring instruments, components and spare parts—because the WRH is distributed to broadcasting and television stations, manufacturers, radio-listeners, amateurs and professionals—all over the world.

● for broadcasting and television stations—because the WRH is able to increase the number of listeners to their respective programmes, and to interest firms in using their respective transmissions as propaganda for their products. Circulation 14,000 copies.

WORLD RADIO TELEVISION VALVE HANDBOOK

A manual for the amateurs and professionals, which *at a glance* gives the correct answer to any practical question concerned with receiving and amplifying valves, T.V. and cathode-ray valves, crystal diodes and transistors of any make. Price: Da. kr. 13.50. £ 0/13/6. \$ 2.50. DM 09.00 plus postage.

TRANSISTORS - THEORY AND PRAXIS

A manual which caters for the people that would like to keep abreast of this modern technique and want to know the theory and to work with small practical arrangements themselves. Will be published in the course of february 1958. Price: Da. kr. 8.00. £ 0/8/6. \$ 1.25. DM. 5.00 plus postage.

WORLD RADIO PUBLICATIONS Lindorffsalle 1, Hellerup, Copenhagen, Denmark

OUR MANUFACTURING RANGE INCLUDES

Transmitting tubes up to the highest power ratings
for medium, high and very-high frequencies and
for television

Radio-frequency generator tubes for medical pur-
poses and industrial applications

Amplifier tubes for long-range communication

High-tension rectifiers and thyratrons for power
supply systems and electronic control

Receiving tubes for broadcast and television sets

Selenium rectifiers

Crystal diodes

Transistors

Temperature-dependent resistors (Thernewids)

PREFACES

A first purpose of a preface is to introduce an author to his readers.

Since we, the broadcasting organizations of the world, can claim to be both the authors and the readers of the World Radio Handbook, this would seem to be rather superfluous.

If the authors require no introduction, then perhaps the Editor? But surely Mr. Lund Johansen would have a right to be offended if presented to us as a stranger?

Would a few well-chosen words, describing the value of this book, be useful? A glance at a single page, filled as it is with precise and factual information is all that is needed to show that the World Radio Handbook is indispensable to everyone engaged in the international fields of broadcasting and television.

Our task at the United Nations, to inform the world of the activities of our Organization, and to make people everywhere familiar with its principles and purposes, has grown immeasurably in the last two years. The United Nations has, in this time, increased in membership from sixty to eighty-one nations - and a new and highly important Specialized Agency has come to join the United Nations family, the International Atomic Energy Agency, with Headquarters in Vienna.

Each year, as the world's technical resources increase, and the distances which divide us diminish, the need for better understanding between men and women everywhere becomes more urgent.

We feel sure that others, engaged, as we are, in promoting this better understanding will find the present volume a constant source of useful and practical information.

PETER AYLEN

Director,
Radio and Visual Services Division
United Nations

"When the new edition of WRH was published last year, I recalled the miracle it represented on its first appearance in 1948.

A miracle that is repeated twelve times can no longer be regarded as a miracle. This time I shall therefore confine myself to saying that it is a fact that each year WRH appears in an ever-improved edition."

LEO WALLENBORN

Secretary General
European Broadcasting Union

What a magnificent service you are rendering to the People-to-People idea in publishing the World Radio Handbook! As you prepare for your twelfth edition I join with your many friends in wishing you every success in your continuing efforts to promote increasing communication among people of all nations.

CHARLES E. WILSON

President
People-to-People, Inc.

The twelfth edition of the World Radio and Television Handbook means a step nearer completion of the information about broadcasting and television in the world. I hope the WRH 58 will be received with the same satisfaction as the earlier editions by broadcasting and television stations, listeners and the advertisers. The contents have been compiled from data supplied direct from the different broadcasting and television stations in response to questionnaires, sent to all stations in the world regardless of politics, religion and race. I am indebted to the Technical Centres of E.B.U. in Brussels and U.I.R. in Prague, to Asociacion Inter-Americana Radiodifusion, to broadcasting and television organizations all over the world, to Danish Embassies, Legations and Consulates, to the Danish Society, to Dx-Clubs and their members - for valuable support in the preparation of the contents of the WRH 58. I should be most grateful to be informed of errors and omissions as well as of any developments affecting the information given in the WRH 58. The WRH publishes information about all stations in the world regardless of politics, religion and race. - For the coming year I repeat my wish, that different countries may cease their jamming activities, which diminish the actual purpose of broadcasting: Promotion of the understanding between the peoples of the world - the motto of the World Radio and Television Handbook. *O. Lund Johansen*

The Latin-American Service of the United Nations Radio Division has just completed production of a series of seven television programs entitled „Por el Bienestar de Todos”, dealing with the work of the Specialized Agencies and the Technical Assistance Administration. On the program dealing with TAA Dr. Gustavo Martínez Cabañas (at the desk), Deputy Director General of U. N. Technical Assistance Adm. was interviewed. Standing are (l. to r.) Mr. José Quijano - Santos and Mr. Leo Rivas jr., producer and narrator resp. of this series.

TELEVISION AND THE UNITED NATIONS

Television develops while the world tries to make argument the natural way of settling differences between competitive peoples. It develops while huge changes are taking place in the traditional ways of life of families everywhere, while the whole fabric of society is subjected to unfamiliar stresses and strains. At the United Nations the efforts of peoples to discover points of contact, to adjust themselves to one another have a critical importance which television alone can adequately, intimately and immediately report in sound and picture.

But, unlike radio, the range of live television is still relatively limited, and international relays such as Eurovision still at the experimental stage. Thus one of the concerns of the United Nations is to make available telerecordings from the conference chamber on the widest possible scale so that they may be integrated into national programmes and encourage public understanding of the Organisation and its work.

Whilst Television, during the past few years, has dramatically altered social habits it has also increased social awareness in the several countries where its growth has been encouraged by government and private enterprise. Its documentary programmes, its encouragement of popular interest in the arts and sciences, in industry and craftsmanship, have considered not only the national scene, but have literally brought home a picture of other peoples ways of going about their daily lives, have made comprehensible their differences and their similarities. And Television is also helping, through public service programmes, to reveal something of the immense task facing the United Nations and Specialised Agencies in assisting people in many parts of the world to help themselves raise their own living standards, acquire new skills and conquer their environment and ancient poverty.

As a medium for public education the prospects are without limit. The teleclub movement here and there has demonstrated what direct influence television may have upon the attitude of the community. As industrialisation proceeds, for example, the tendency is for town and country dwellers to become estranged, and television has been usefully enlisted to help reconcile the conflicting interest by providing both with a forum on which the attitudes of one can be visually interpreted to the other.

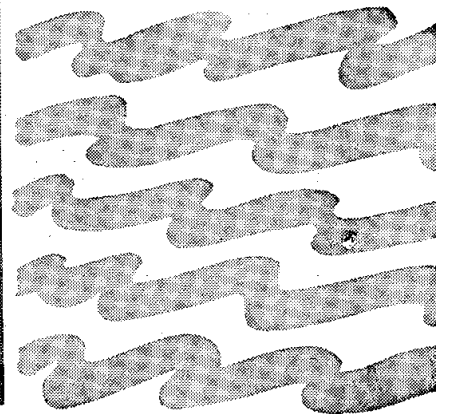

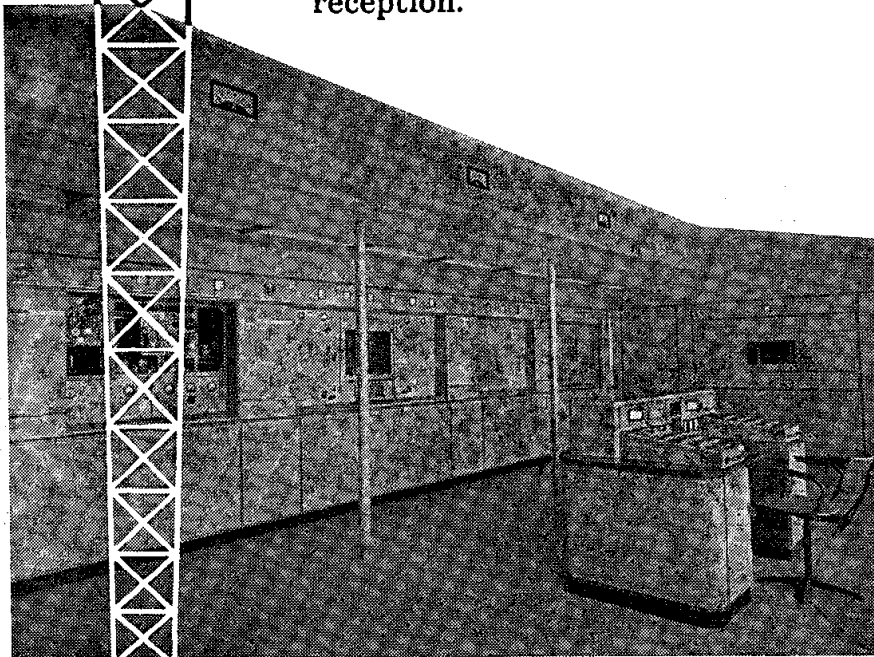

And in the classroom, ranging through the syllabus, television is demonstrated as particularly useful in the fields of human geography and current affairs where the spectacle of representatives of countries working out their common problems in international organisation provides the child both with precept and example for the future.

Statistics are an eloquent reminder of the growth of television during the past five years and equally a reminder of our common responsibility to use it to its full capacity in the interest of peace.

PETER AYLEN
Director, Radio and Visual
Services Division, United Nation

A quality link between

In all corners of the globe many people will be listening to broadcasts that come to them via the loudspeaker of their Philips radio set. From the purity of the sound and the excellent selectivity they will realize that everything possible is done in the Philips factories and laboratories to attain the highest quality of reception.

Q02

Real radio enjoyment, however, is not only dependent upon the quality of the receiving set. The broadcasting stations have to give careful thought to the composition of their programmes.

Much time and money is taken up by the selection of good talent and, last but not least, the technical equipment has to be in perfect condition.

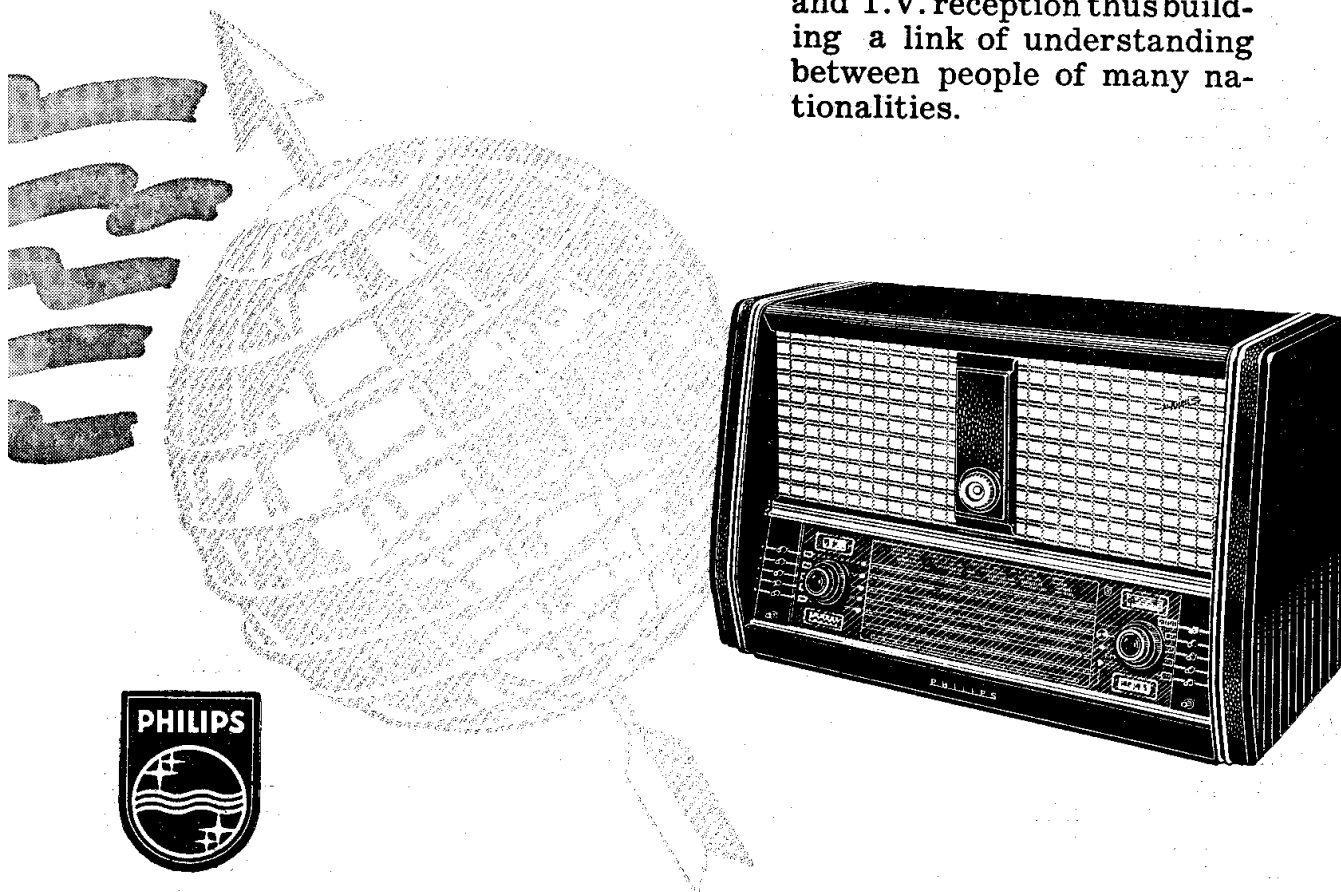

PHILIPS *for dependable*

speaker and speaker

Also at this end of the „bridge“ between the listener and the studio Philips play an important part.

Just as they make many types of Philips radioplayers, they manufacture quite a range of different studio equipment and transmitters ranging from 50 watts to 100 kilowatts and comprising types for different wavelengths and modes of modulation. In the field of television too, Philips equipment forms a quality link between camera and screen.

By producing quality equipment for both the broadcasting stations and the home, Philips make their contribution to better radio and T.V. reception thus building a link of understanding between people of many nationalities.

transmission and reception

T. W. Bennington is an Engineer of the British Broadcasting Corporation. He has been engaged in short-wave radio since 1932, when he was in charge of the radiotelephone equipment and service in RMS "Majestic". Joining the BBC in 1934 he was at first a transmitter engineer, and then, for 15 years, in the Department concerned with short-wave planning. Now with the Corporation's Research Department he is concerned with long-distance short-wave propagation, and with the application of ionospheric data to long-distance transmission. He is the author of numerous articles on this subject, and of the book "Short Wave Radio and the Ionosphere", published by Iliffe and Sons, Ltd., of London.

SHORTWAVE CONDITIONS DURING 1958

T. W. Bennington, Research Dept., BBC, England.

As is now very well known long-distance radio wave propagation is subject to several types of periodic variation, the principal of which are a diurnal variation, a seasonal variation and a long-period or sunspot-cycle variation. All these are due to variations which occur in the ionosphere (which is the medium through which the waves are propagated from point to point on the earth's surface) and they occur because the ionosphere is produced by the sun. Thus it varies, and the short-wave conditions sympathetically vary, in accordance with the sun's action upon it.

The diurnal and seasonal variations are of a systematic kind at any given place upon the earth's surface. But they are complicated by the fact that, superimposed upon them, is the sunspot cycle variation, which produces different conditions at a given time of day and month, in different years. And in making an estimate of short-wave conditions during 1958 it is the sunspot cycle variation with which we have principally to contend.

Let us be quite clear at this point by recognising the fact that it is not possible, at present, to predict the course of a sunspot cycle very far ahead with any accuracy. The best that we can do is to study the past 19 cycles of which we have continuous records, and, noting the different characteristics of different types of cycle, put the present cycle into the class to which it belongs, and assume that it will behave in the future very much like the mean behaviour of the other cycles of its class.

The present sunspot cycle is one of the type with a high maximum, in fact it appears to have the highest maximum yet recorded. Such cycles are, almost without exception, of a "saw-tooth" shape, having a short "rising" period (about 3 years) preceding the maximum, and a long "falling" period (about 8 years) following the maximum. During the period immediately following the maximum the average sunspot activity therefore decreases quite slowly.

At the time of writing (July) the situation is complicated by the fact that sunspot maximum has not yet occurred: the average sunspot activity is still rising. Sunspot maximum is determined from the "smoothed" or twelve-month mean value of the monthly sunspot numbers, not from the monthly values themselves, for they fluctuate considerably from month to month. The twelve-month mean value, as determined from the last twelve monthly values, belongs, of course, to an epoch 6 months back, which is the latest time for which it can be known. Thus, the addition of the monthly value for June 1957 to the preceding eleven gives us the twelvemonth mean value for the epoch Dec 1956/Jan 1957 of about 163.

We cannot, therefore, yet be sure about the time of sunspot maximum, but let us make the assumption that it will occur when the monthly value for July has been added, which places it at the epoch Jan/Feb 1957. From then on, we will assume, the average sunspot activity will be decreasing. Even the smoothed value may undergo some fluctuations, but we will neglect these, and assume a steady, but slow, decrease. A fair estimate, having regard to the behaviour during the past high-maxima cycles, is that by December 1957 the smoothed sunspot number will have decreased to about 140, and by December 1958 to about 110. Throughout 1958, therefore, the sunspot number is likely to remain well above 100, and, so far as short-wave radio is concerned, high frequency conditions are likely to prevail. In fact the usable frequencies are not likely to be very much lower than they have been of late. They may, however, be a little lower, the greatest decrease from present frequencies being during the winter day and the least during the winter night.

It is, of course, quite impossible here to indicate in detail the best usable frequencies for 1958 for all times of day and seasons, and for a large number of circuits, for conditions will vary very much over different parts of the earth's surface. A few general remarks may, however be of interest. Over long distance circuits from the northern hemisphere, during the early months of the year frequencies as high as 40 Mc/s may be propagated during the day, but by March this will no longer be so, and towards the end of the year, though the frequ-

— REGARDLESS OF SIZE OR APPLICATION.**

ROCKE INTERNATIONAL acts as either the international division or the export representative of more than twenty-five American firms who manufacture equipment ranging from microphones and klystrons to complete broadcasting stations.

In addition to offering this equipment, Rocke International has broadened its services to include specifications of all related equipment, design of special equipment and complete systems, local surveys, supervision of installations and even the design and supply of buildings to house a broadcasting station or communications operation.

Rocke International Systems include:

- **COMMUNICATION**
- **BROADCAST**
- **TELEVISION**
- **AUDIO EQUIPMENT**
(tape recorders, microphones,
loudspeakers, etc.)

With full assortment of products in these fields, Rocke International can meet your complete requirements. Purchasing from one source keeps your procurement costs at a minimum, speeds delivery and establishes a single commercial and technical responsibility.

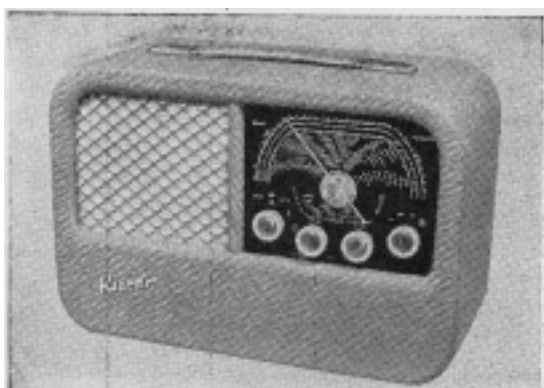

Branches and Affiliates are located in: Paris, London, Brussels, Turin, Zurich, Manila, Beirut, Mexico City, Havana, Caracas, Buenos Aires, Sao Paulo, San Jose (Costa Rica), Stockholm, Frankfurt/Main, and Washington, D. C.

For further information, catalogs and prices write to:

ROCKE INTERNATIONAL CORPORATION

AN OPEN WINDOW TO THE WORLD

THE "KURÉR"

– the radio for everyone everywhere! A supersensitive portable set which has won extraordinary reputation in more than 50 countries. Operates on AC 110–230 volts or on its self-contained one unit 90/1.5 volts battery, giving 350 working hours. 4 bands including tropical.

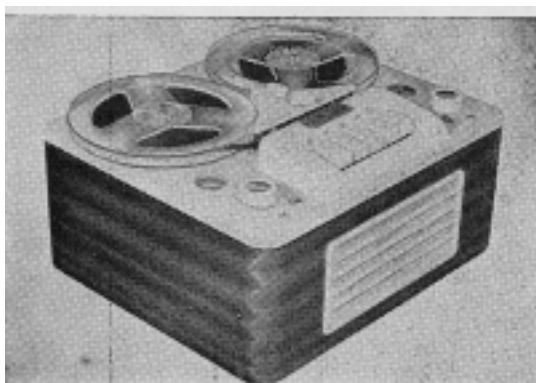

Unbelievable range of selection – Magnificent tone. 4 valves plus metal rectifier.

THE "STUDIO 3D HI-FI"

A magnificent High Fidelity console unit - finished in high polished nut, mahogany or teak. A giant dial, more precise than usually found – band spread tuning on all short wave bands.

The ideal combination of "Symphony 3 D" Hi-Fi AM/FM receiver, Garrard 4-speed record changer and 3-speed twin track, completely independent RADIONETTE B 5 tape recorder.

TAPE RECORDER B5 3 SPEED HI-FI

A remarkable new RADIONETTE Tape Recorder with outstanding features such as three recording speeds, control-panel with 5 press-buttons, track selector and tape turn counter.

Internal high efficiency elliptical speaker. Cabinet in polished mahogany, with a white-coloured metal top panel. Completely independent unit.

Exceptional sound quality – Easy to operate.

NORWAY'S LEADING RADIO MANUFACTURER

RADIONETTE

TRONDHEIMSVEIEN 100, OSLO, NORWAY

RADIO NORWAY

has daily transmissions directed towards all parts of the Globe. The programmes are mainly presented in Norwegian, but the music is also introduced in English. Norwegian music is deeply rooted in the old Norwegian folk tunes. The Hardanger fiddle is a highly developed national instrument, and many of Edvard Grieg's compositions are based upon the sound effect of this violin with its additional four resonance strings. The programme in English, NORWAY THIS WEEK, - in which the country is presented through glimpses

from various sides of its social, economical, political and cultural life - can be heard every Sunday.

For reports and comments, please write to: RADIO NORWAY, OSLO, NORWAY.

Ev.: (Transmission times - please see NORWAY)

SHORTWAVE

Continued from page 10

enies will increase again, it is unlikely that they will reach 40 Mc/s very frequently. Over East/West circuits in mid-latitudes the 26 Mc/s broadcast band should be usable during daytime during all months except the 4 months centred around midsummer, and in extreme midsummer the 21 Mc/s broadcast band will be very near the MUF. At night the 15 Mc/s band should be usable from March to August, but during the other months 11 Mc/s and 9 Mc/s will be required. Over North/South circuits

during the daytime the 26 Mc/s band should be usable throughout the year, and at night 17 Mc/s should be good during the summer and equinoctial months, and 15 Mc/s and 11 Mc/s during the winter night.

As a rough guide to the highest frequencies likely to be usable in the broadcast bands the following table is given, indicating conditions over three specific circuits between Europe and other parts of the world. During times not given the highest usable frequency is likely to be between those given for the nearest times, except during the early morning, when it is likely to be lower than those given. It is stressed, however, that unforeseen fluctuations in the solar activity may cause variations in the frequencies which at present seem likely to be usable during 1958.

BROADCASTING ORGANIZATIONS UNION EUROPEENNE DE RADIODIFFUSION (U.E.R.)

Seat and Administrative Office: 1, rue de Varembe, GENEVE.

Technical Centre: 4, rue de la Vallée, BRUXELLES.

Monitoring Centre: Jurbise (Belgium).

International Coordination Centre for TV/Programmes exchanges (Eurovision): Palais de Justice Bruxelles.

Administrative Council (1957-1958): President: Sir Ian Jacob, Director General, The British Broadcasting Corporation.

Vice-Presidents: MM. Léon Daumard, Inspector General »Radio-diffusion-Télévision Française« and Georges Conus, Director Administration The Swiss Broadcasting Corporation.

Administrators: Representatives of the broadcasting organisations in: Austria, Denmark, Finland, France, Germany (Fed. Rep.), Italy, Netherlands, Switzerland and United Kingdom.

Director of the Administrative Office and Secretary General: M. Léo Wallenborn.

Director of the Technical Centre: M. Georges Hansen.

Active Members: The broadcasting organisations of: Austria, Belgium, Denmark, Egypt, Finland, France, Germany (Bundesrepublik), Greece, Iceland, Israel, Ireland, Italy, Lebanon, Luxembourg, Monaco, Morocco/Tunesia, Norway, Netherlands, Portugal, Spain, Sweden, Switzerland, Syria, Turkey, United Kingdom, Vatican City, Yugoslavia.

Associate Members: The broadcasting organisations of: Australia (ABC), Belgian Congo, Burma, Canada (CBC), Ceylon, Haiti, Japan, New Zealand, Pakistan, Portugal, Union of South Africa, United Kingdom, (I.T.A. and Television Programme Contractors Association), United States (US Information Agency, N.A.E.B., C.B.S. and N.B.C.).

Publications: EBU BULLETIN (every two months in English and French). – Long and medium waves report (European Area). – Short waves report.

INTERNATIONAL BROADCASTING ORGANIZATION OIR

ADDR.: 15, Liebknechtova, Prague 16, Czechoslovakia. – Cable: Interadif, Praha.

Nature: International organization dealing with practical and certain

theoretical questions connected with broadcasting and television programmes and technique and co-operation between broadcasting and television organizations.

Governing Body: General Assembly consisting of one representative for each full member.

ADMINISTRATIVE COUNCIL: Consisting of 7 to 13 members. Chairman for 1957: Representative of the Soviet Union.

Vice-Chairmen for 1957: Representatives of China and Czechoslovakia.

Members: Peoples Republic of Bulgaria, Peoples Republic of China, Czechoslovak Republic, Finland, German Democratic Republic, Soviet Socialist Republic of Lithuania, Peoples Republic of Mongolia, USSR.

MEMBERS: PR of Albania, Byelorussian SSR, PR of Bulgaria, Chinese PR, Czechoslovak Republic, Estonian SSR, Finland, German Democratic Republic, Hungarian PR, Korean People's Democratic Republic, Latvian SSR, Lithuanian SSR, Moldavian SSR, PR of Mongolia, PR of Poland, Rumanian PR, Ukrainian PR, Union of Soviet Socialist Republics, PDR of Vietnam.

Facilities: Technical Centre: Prague, Czechoslovakia.

Publications: Documentation and Information Bulletin in Chinese, English, French and Russian issued every two months. Technical Documentation and Lists of broadcasting and television stations in operation. Bimonthly OIR Information and monthly Catalogues: a) radio programmes, b) television programmes – suitable for exchange.

Meetings: General Assembly at least once a year. Administrative Council at least once a year.

Relations with other international organizations: Official relations with the ITU, UNESCO, the Economical and Social Council of the United Nations Organization and others.

UNESCO

(United Nations Educational, Scientific and Cultural Organization) Radio Division, Department of Mass Communication.

Address: 19, avenue Kléber, Paris 16e. Telephone: KLEber 52-00.

Chief of Radio Division: Walter Steigner

Deputy-Chief: José Garza y de Garate

Chief of English production: Rex Keating

Chief of French production: Fernand Poucy

Chief of Spanish production: José Garza de Garate

Chief of German production: Walter Steigner.

BROADCASTING ORGANIZATIONS:

(Continued from page 15)

ASOCIACION INTERAMERICANA DE RADIODIFUSION (AIR): AIR is an association of the broadcasting corporations of the American countries. Founded in 1946 it represents more than 4000 broadcasting and 400 television stations. Its purpose is to preserve free and stable broadcasting, promote cooperation between broadcasting corporations and the public Authorities, to raise the cultural level of the peoples, and to work for a closer feeling of association between the broadcasting corporations of America. AIR is recognized by the United Nations and collaborates with UNESCO, with the International Union of Telecommunications, with the organizations of the American States. AIR has subscribed to the »Panama Doctrine« in which the American Radio and Press declare themselves united against any attack on individual liberty and any restriction of the freedom of utterance. During the last General Meeting, held in Lima, Peru, AIR issued a Declaration of Principles of Ethics on which such members as have not yet done so, will have to base themselves for the compiling of their Ethic Codes. On October 4 1956, AIR celebrated its tenth anniversary. Associations in twenty countries are affiliated to AIR, President of AIR is Senor Ricardo Vivado Orsini (Chile), 1st Vice Pres.: Raul Fontaina (Uruguay); 2nd Vice-Pres.: Alberto Lleras Camargo (Colombia); Secretary: Emilio Azcaraga (Mexico); Dir. Gen.: Julio Menadier Carrasco (Chile). Address: Casilla 3591 Santiago, Chile.

ASSOCIATION CATHOLIQUE INTERNATIONALE POUR LA RADIODIFFUSION ET LA TELEVISION

General Secretariat: Avenue de la Gare 6, Fribourg-Switzerland.

General Secretary: Dr. J. Schneuwly.

Administrative Council consists of 12 members. President actual: Mag. Dr. J.B.Kors, OP, Hilversum/Holland. - **Committees:** a) TV-programmes. b) Radio-TV and the child. c) Publications.

Associate Members: Union of So. Africa, Algeria, Germany, Argentina, Austria, Belgium, Bolivia, Brazil, Canada, Costa Rica, Vatican State, Colombia, Cuba, Curaçao, Denmark, Egypt, Spain, Haiti, Indonesia, Iraq, Ireland, Italy, Morocco, Norway, Portugal, Puerto Rico, Peru, El Salvador, Luxembourg, Sweden, Switzerland, Trinidad, Venezuela, Australia, Ceylon, Belgian Congo, San Domingo, Monaco, Panama, Ecuador, Japan, Philippines, Paraguay, Tunisia, Uruguay, Chile.

Correspondent Members: French West Africa, Mexico, USA, Nicaragua, Panama (Canal Zone), Honduras.

Publications: Quarterly bulletin "UNDA", printed in French, stencilled in English and Spanish. - "UNDA-NOUVELLES", monthly, stencilled. The first "Catalogue of records of Religious Music", containing a list of more than 2000 records, was published in 1956.

General Assembly: Every two years: Last General Assembly: 1st, 2nd and 3rd of October 1957 in Geneva. - Congress: every 2-4 years; last congress in Vienna in 1955. Next Congress in Central America in 1959. Branch: For Latin America: Addr.: Catedral 1773, Santiago de Chile.

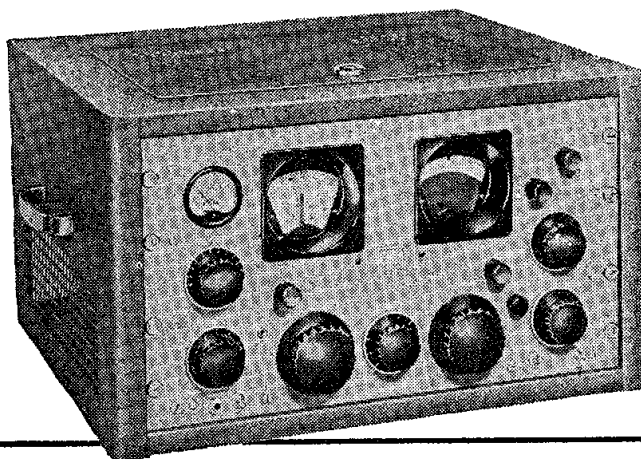

The Editor of the World Radio Handbook seeks information from all stations engaged in broadcasting and interested in international broadcasting and publishes the information as communicated to him by the stations. The Editor cannot be held responsible for the correctness of this information or for not publishing schedules and other particulars of stations which do not supply the information or for changes in the times and wavelengths of programmes made after the current edition has gone to press. We ask you to pay attention to the last minute information and corrections; (see last page).

YOUR BEST BUYS...

in Communications Receivers

HQ-100

Q-multiplier for continuously variable selectivity. Electrical bandspread tuning. 10-tube superheterodyne with noise limiter. Auto-response circuit for finest fidelity under all conditions. Optional Telechron Timer. Completely voltage regulated and temperature compensated. Continuously tunable from 540 KCS to 30 MCS.

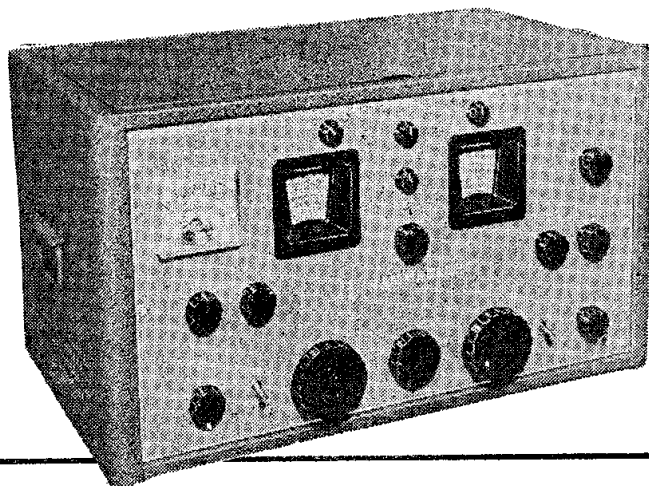

SUPER-pro 600

The last word in modern Communications Receivers . . . new in both electrical and mechanical concept. Combines the utmost in stability, sensitivity, precision tuning and mechanical reliability. A 20-tube dual conversion superheterodyne covering the range of 540 kc to 54 mc in six bands. Selected by the United States Government and almost every Government in Latin America.

HQ-150

A really different receiver. Combines Q-multiplier with crystal filter to provide the widest range of tuning techniques. Extra fine superheterodyne circuit with full noise limiter. Full 2-watt output. New, improved S meter with illuminated scale. Built-in crystal calibrator.

Write today for full details and illustrated literature on these and other Hammarlund Communications Receivers.

RCA SHORT- WAVE and MEDIUM- WAVE

BTA-50G, the new RCA 50 KW AM "Ampliphase" transmitter, represents the most significant step since RCA introduced high-level modulation. It occupies half the floor space required by other 50 KW transmitters, cuts installation and operating costs, eliminates need for underfloor trenches, costly water cooling systems or external blowers. All components are easily accessible and can be quickly replaced.

TRANSMITTERS

Since its formation in 1919, Radio Corporation of America has been in the forefront of major advances in radio communications of every type. In virtually every corner of the globe RCA short-wave and medium-wave broadcast transmitters are providing day-in, day-out dependability under all extremes of climatic and operational conditions.

As the producer of the finest in transmitters, its experience in the radio industry is unparalleled.

At its research and engineering laboratories, RCA engineers conceive and develop the most advanced and improved circuits and mechanical components.

New RCA electron tubes and semi-conductors are being developed and produced to meet the changing needs of the entire industry, as well as specific RCA equipment.

For over a quarter of a century, RCA scientists have provided a constant flow of technical knowledge to the expanding radio and electronic industry ...and products, facilities, and services to the world.

The RCA monogram is universally recognized as

a symbol of the radio age, that has brought new pleasures in entertainment, new techniques of communication, and new opportunities to millions of people throughout the world. It is a mark of quality and superior craftsmanship.

RCA broadcast transmitters have proven their economy and dependability in many years of long service for many types of broadcasters, such as the National Broadcasting Company network, the Finnish Broadcasting Company, Radio Pakistan, Radio Istanbul, and hundreds of private broadcasters.

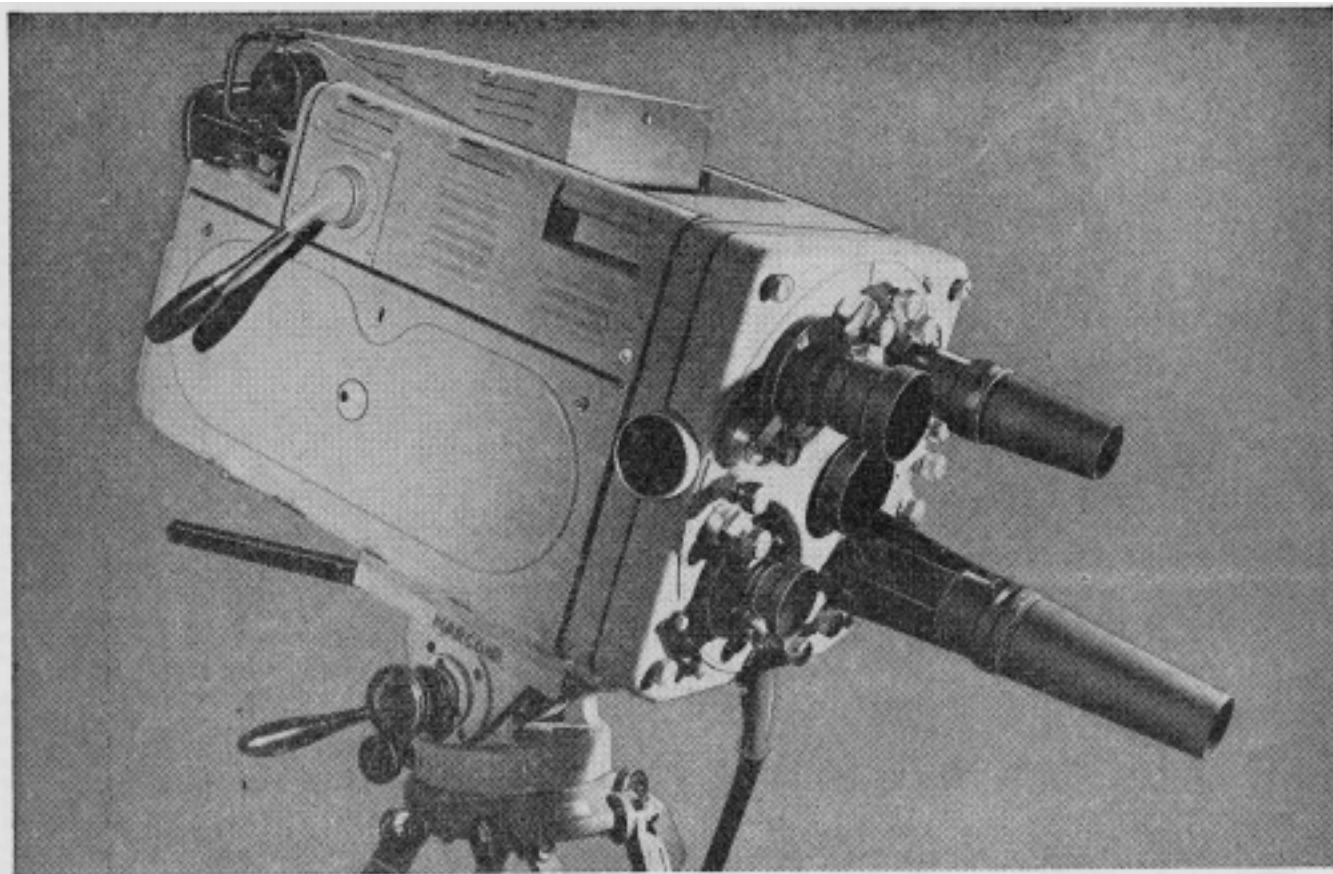

RCA short-wave communications transmitters are preferred by many governmental and private communications organizations. Transmitters up to 1.2 megawatts of output have been built by RCA, and are used around the world to provide every type of radio communications.

For the best investment in short and medium-wave transmitters see your RCA Distributor or write to Dept. BE-50-L RCA International Division, Radio Corporation of America, 30 Rockefeller Plaza, New York 20, N. Y., U.S.A.

TRADEMARK ® REGISTERED

Marconi Camera Channels

IMAGE ORTHICON CAMERA Type BD808 (illustrated)

Features

- Uses either 3" or 4½" Image Orthicons.
- Designed for ease of servicing, excellent accessibility and plug-in sub-units.
- Four position turret will carry any combination from 2-inch to 40-inch lenses. 80-inch and zoom lenses may also be used.
- Viewfinder can be tilted up or down to give the most comfortable viewing position.
- Camera Control Unit may be used with 10" picture tube and 3" waveform tube, or with 14" picture tube and 5" waveform tube.
- Remote control of light intensity by variable graded filter.
- Optional remote control of focus and turret. Optional semi-automatic alignment circuit.
- Built-in turret for neutral density and colour filters.
- Full range of accessories available for both studio and outside broadcast roles.

BROADCAST VIDICON CAMERA Type BD864

The most recent addition to the Marconi range of Television Equipment.

Features

- Compact, easily operated by one man. The camera has integral viewfinder with 7" tube and 2½" waveform monitor and includes all operational controls.
- Channel consists of Camera and Power Supply only—but optional Remote C.C.U. and Monitor position available.
- Use of close-tolerance double-triodes in all valve circuits except one and printed wiring assemblies ensures great reliability.
- Rapid semi-automatic beam alignment, built-in aperture correction and gamma correction circuits are provided. Designed to make the best use of any of the present Vidicon tubes and with ample flexibility to deal with foreseeable developments.
- 4-position turret with positive location takes wide range of fixed and zoom lenses.

Denmark.

WE CAN HAVE FAITH IN RADIO

Apart from the general programmes aimed at the development of education, science and culture, Unesco is concentrating on three major projects: the promotion of elementary education in Latin America, the transformation of the world's arid zones into fertile lands and the mutual appreciation of Occidental and Oriental cultural values.

The medium of broadcasting should prove particularly useful to all educational and cultural projects. While the astonishing rise in popularity of television in some parts of the world undoubtedly has changed many listeners into viewers, we must not forget that there will be no television in vast areas of technically less-developed countries for decades to come.

Moreover there are more than 3,000 main languages being spoken all over the world, excluding dialects, most of them with no literature of their own. Broadcasting is the only practical way in which the masses in Africa and Asia may be reached in their own tongues. A recent survey of world illiteracy has revealed that, although the number of schools is growing it cannot keep pace with the world's population. In fact, illiterates are still on the increase. Mankind can send new moons to the sky but is not able to solve the problem of ignorance here on earth.

For financial and technical reasons, sound radio is bound to dominate the field for years to come, even if television could give more effective help. The challenge of *to-day* in those technically less developed countries is to develop the use of education by sound radio so as to make both adults and children ready for the new opportunities of life to which those people are entitled. It is a great challenge.

Over a period of years Unesco has established close contacts with broadcasters and radio organizations in its Member states. As a general policy Unesco will seek to provide such services as are not readily available and which it is able to provide by virtue of its international status. Unesco will increase its efforts to promote a free exchange of radio programmes on educational, scientific and cultural themes. In particular, it will invite Member states to produce documentary, round-table and other programmes within the framework of their national organizations which may enhance the appreciation of differing cultures.

Broadcasting recognize no frontiers. The Hertzian waves already carry the word around the world and it is a question of time only before the image also can be added. No media of communication can at any particular time bring people more closely together, and teach them to live together and work together than can radio. We can have faith in the radio.

The *World Radio Handbook* has been serving the world radio community for over ten years and in doing so it continues to fulfil a very important mission. *Walter Steigner*, Director UNESCO Radiodivision.

GATES BROADCASTING EQUIPMENT

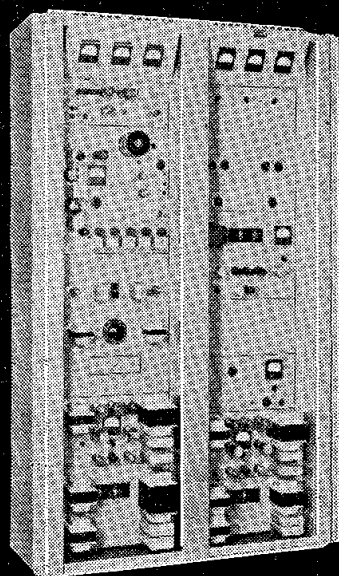

**AUTO STATION—
PRODUCTION UNIT**

MICROPHONES

DUAL CHANNEL CONSOLE

TV TRANSMITTER

GATES is the largest supplier of AM radio broadcasting equipment in the U.S.A. The prime reason for GATES' popularity everywhere, is that while maintaining the highest standards of Quality, GATES equipment is always competitively priced—and equally important, costs less to install and to operate. Why not write today for descriptive literature and engineering data on this modern GATES equipment.

A full line of AM & FM broadcasting, television and communication transmitters from 250 watts to 50 kw.

● Speech Input Equipment • Transmitter Control Consoles • Master Control Consoles • Speech Input Consoles • Plug-In Preamplifiers • General Purpose Consoles • Transcription Turntables • Mobile Sound Effects Console • Automatic Programming Equipment.

● Remote Amplifier Equipment • Directional Phasing Equipment • Monitoring Equipment • Oscillators • Remote Control Equipment.

INTERNATIONAL DIVISION

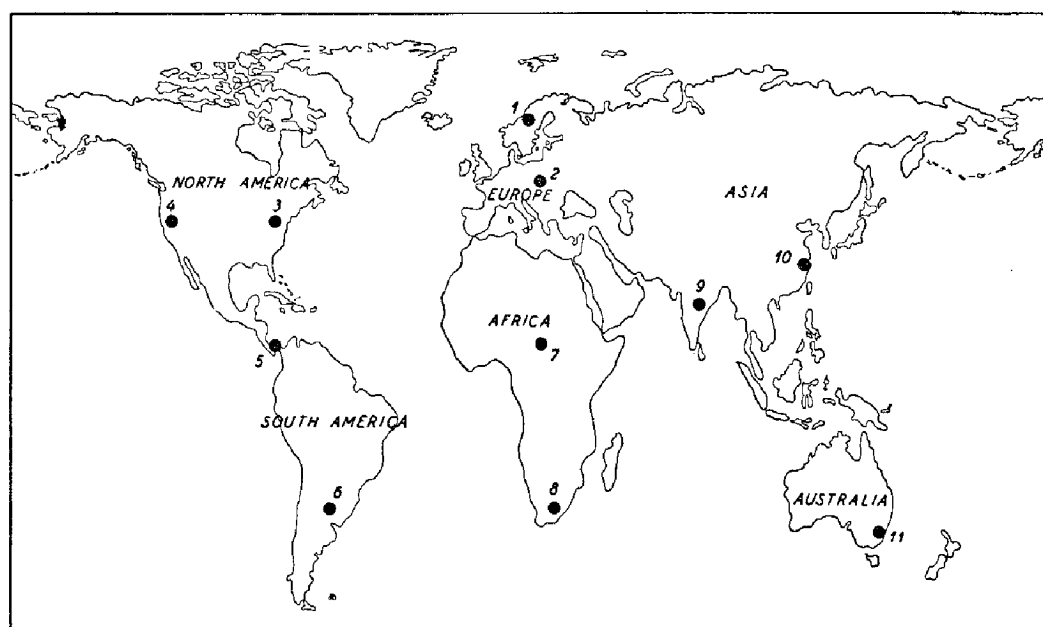

13 E. 40th Street, New York 16, N. Y., U.S.A. Cables: ARLAB

FOR BEST SHORT-WAVE RECEPTION IN EVERY PART OF THE WORLD AT VARIOUS TIMES OF THE DAY IN 1958.

The figures in the table can be regarded only as average figures, as conditions will vary considerably from time to time due to irregularities in the ionosphere.

Example: A listener located in the eastern part of No. Am. (area 3) wishes to hear a station in the so. part of Af. (area 8) on a Jan. evening (21 local time). By following the horizontal column of figures starting at No. Am., East, on the left until it meets the vertical columns under the area no. 8 in the section for the months Nov., Dec., Jan. and Feb. on the right, he will come to the figure 25. This means that the 25 m. b. is the most suitable for listening to the required station at that time.

The listener's area	Local time	Area of the transmitting station

HOW TO USE THE WORLD RADIO HANDBOOK

The practical information given in the following section in respect of the broadcasting services of each individual country includes:

Local Time and Languages used are indicated for each country and as far as possible the number of receivers in use.

The Addresses of the broadcasting companies in question. Where broadcasts are commercial this is stated.

Names and Titles of the leading personalities in each company.

List of Stations (A.M., F.M.) operated by each company with call signs of their transmitters, all frequencies and wavelengths (medium-, shortwave, ultrashortwave), as well as their power expressed in kilowatts (or watts) or megacycles.

Each short-wave station has its own identification call sign consisting of 3-5 letters or a combination of letters and figures of which the first, or two first, denote the nationality in accordance with the international list of station prefixes. (See page 21). Some short-wave stations, the American ones for example, use these call-signs when announcing themselves.

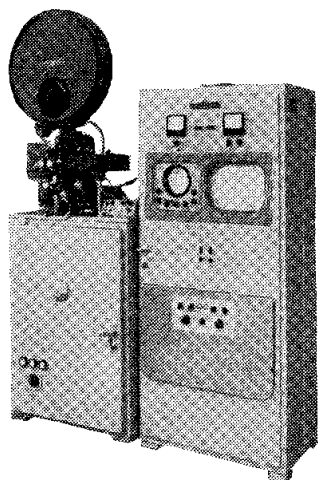

Long and medium wave stations are divided into three categories, viz. (1) **Main Stations**, which are so powerful that they can generally be heard throughout the whole area of the country in question, and from which most of the broadcasts emanate; (2) **Regional Stations**, which can be heard only within a certain area of the country, and whose broadcasts consist partly of re-transmissions of the programmes of the main stations and partly of their own programmes; (3) **Relay and Local Stations**, which mostly re-transmit main station programmes. These relay stations are the weakest, and are local stations which can be heard only within a limited area. The above-mentioned stations are all **AM stations**, i.e. amplitude-modulated station. In addition, there is a fourth category of stations: (4) **FM stations**, i.e. frequency modulated stations, in order to give listeners a reception free of interference. These stations have only a very short radius, and are consequently local stations.

Most short wave stations use directional aerials, i.e. their broadcasts are directed toward particular areas, and these give the names to the various services: European Service, Near Eastern, Middle Eastern, Far Eastern, Pacific, Latin-American, Caribbean Service, etc. Language and frequency employed vary according to the area to which broadcasts are directed.

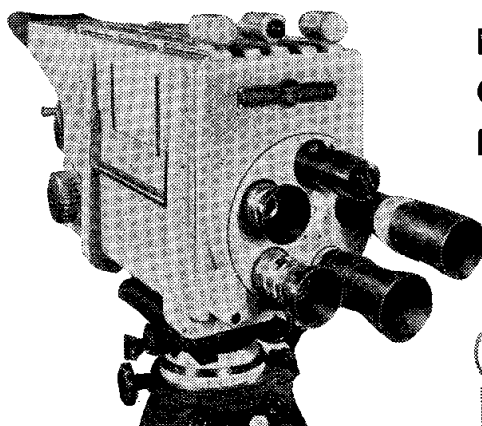

The best reception should be obtained from the transmissions which are specially directed to your

HOW TO USE THE WRH *continued from page 30.*

area. However, there is a good deal of overlapping between adjacent service areas, so that it is often possible to obtain good reception outside the times shown. Short wave propagation conditions are continually changing because of the influences of daylight and darkness, seasonal considerations, and solar activity. In consequence, waveband changes have to be made from time to time if good reception is to be maintained.

Times are shown on the 24 hours system. In this system midnight is 00.00 hrs., 3 am: 03.00 hrs., 10 am: 10.00 hrs. and midday 12.00 hrs. Instead of starting again at 1 o'clock, as the 12-hour system does, the 24-hour system continues to increase the number of each hour until 23.59 (11.59 pm.) is reached. Thus 13 hrs. is 1 pm., 17.00 hrs. 5 pm. and so on. The great advantage of the system is that it eliminates any possible confusion between times a.m. and times p.m.

On page 18 you will find a Local Time Conversion Table which gives the local times (summer and winter) in most parts of the world in relation to Greenwich Mean Time (G.M.T.). For example, from September to May it is 15.00 hours New York time when it is 20.00 hours G.M.T., since the table indicates that local time in New York is 5 hours behind G.M.T. From May to September U.S.A. introduces daylight saving time and, consequently, it is 16.00 hours New York time when it is 20.00 hours G.M.T. If you are listening at sea you should consult the radio-officer for the varying differences between ships's time and G.M.T.

Frequency and wavelength. Frequency and Wavelength are divided into the following groups: **Long waves, medium waves, short waves and ultra short waves (V.H.F. - very high frequencies - FM).**

The wavelength of a station is measured in metres, and kilocycles per second (kc/s); for FM-stations in megacycles per second (mc/s). A kilocycle is 1000 cycles; a megacycle 1,000,000 cycles.

As the velocity of propagation in space is, in round figures, 300,000,000 metres per second, any of the quantities—metres, kilocycles or megacycles—are readily converted into the other forms by means of the following formulae:

Metres to Kilocycles

$$\text{Metres} = 300,000 / \text{Frequency (kc/s)}$$

Kilocycles to Metres

$$\text{kc/s} = 300,000 / \text{Wavelength (metres)}$$

Metres to Megacycles

$$\text{Metres} = 300 / \text{Frequency (Mc/s)}$$

Megacycles to Metres

$$\text{Mc/s} = 300 / \text{Wavelength (metres)}$$

Daily Programmes: Under this heading you will find information concerning the total broadcasting

ERRES KY 5791

(Exploretether)

The only **HAM** receiver designed for the livingroom

The fabulous reception qualities, that are housed in this beautiful cabinet, are but part of the pleasure this set will provide. The four loudspeakers and the additional channels for High Fidelity reproduction together with unlimited Acoustical Balance Control form the basis of true to life music reproduction. Both tape recorder and recordplayer can supply the Concert Hall enjoyment when you are tired of your trips abroad. More than words can say a demonstration will do.

Ask your friendly ERRES dealer for a demonstration of this exceptional ERRES receiver.

HOW TO USE THE WRH *continued from page 32.*

hours on the different frequencies employed during transmission hours, as well as a survey of the news and other fixed programmes of interest: National music, mailbag, language lessons, weather reports, program preview, time signals etc.

Announcements: The language alone is not a conclusive indication of the origin of a broadcast to which you may be listening. Hearing a programme in French or Spanish, for instance, does not necessarily mean that it is transmitted by a French or Spanish station respectively. To make sure of identifying a station correctly, it is, therefore, essential to wait for the announcement which every station broadcasts at regular intervals. These call signs are given in this book for practically all the stations listed.

Interval-Signals: For identifying stations it is also of importance to know the signals used during the intervals between programme items. Under each station you will, therefore, find a indication of the type of signal used, and in many cases a reproduction of the musical notes of this signal.

Shortwave broadcasting takes place mainly on the following metre bands (m.b.):

49 metre band – 41 metre band – 31 metre band – 25 metre band – 19 metre band – 16 metre band – 13 metre band and 11 metre band.

Many short-wave stations lie outside these bands. The 60 and 80 metre bands are used for local broadcasting, i.e. for reception over relatively short distances, which applies, for example, to many South and Central American stations and stations in Central Africa

In the following pages you will find a large variety of call-signs and frequencies. In many cases these belong to the same transmitters which are connected to different aerials designed to radiate signals to the best advantage in respect of each service. The various call-signs usually serve to identify individual frequencies.

Many programmes are broadcast simultaneously from several transmitters on different frequencies, which enables you to select the one which is the most clearly audible in your area or on your particular receiver. If reception on one of the frequencies used is poor, you should examine reception conditions on the other frequencies employed by the same station. On page 24 you will find a table of the most suitable metre bands for best short-wave reception in every part of the world at various times of the day throughout the year 1958.

Verification by QSL-cards. As indicated in the survey of the broadcasting services of the various coun-

HOW TO USE THE WRH *continued from page 35.*

tries, many of the stations listed are interested in receiving reports from listeners in respect of their transmissions. These stations acknowledge reports by sending listeners a QSL-card (verification) or a letter. For most of these stations it is stated whether reports are answered by QSL-card or letter and if return postage is required. If nothing is mentioned, it is unnecessary to send reply postage. Many short-wave listeners make a hobby of collecting these QSL-cards which are often elaborately designed and colourful.

Reports from Listeners: Listeners' reports can in most cases be written in English, but Spanish is preferable when writing to South or Central American stations.

In the new edition of How to listen to the world you will find all information about how to write your reports to the stations. -

If reply postage is required by a station, enclose with your reports an International Reply Coupon obtainable at most post offices. The full address of each station will be found in the individual surveys.

How to identify a short-wave station:

Whenever you come across a station which is unknown to you, proceed as follows for identification: Read the approximate frequency indicated on your dial in megacycles or kilocycles or the wavelength in metres. Find from the table of frequencies and wavelengths what station are working in the neighbourhood of the reading shown by your dial. When you have reduced the source of the broadcast to one or two possibilities and at the same time noted details of the program heard and the language used, check these data against the program surveys printed in this Handbook. For confirmation it is advisable to wait for the station announcement or interval signal mentioned previously.

Reception reports are particularly useful to the engineers in selecting the most suitable wavelength's for your area. Use of the SINPO code or of the „555" code for reports are very helpful. The codes are as follows:

SINPO-code					"555"-code		
S	I	N	P	O	S	I	O
5 excellent	5 nil	5 nil	5 nil	5 excellent	0 inaudible	0 very strong	0 nil
4 good	4 slight	4 slight	4 slight	4 good	1 very weak	1 strong	1 very poor
3 fair	3 moderate	3 moderate	3 moderate	3 fair	2 weak	2 fairly strong	2 poor
2 poor	2 severe	2 severe	2 severe	2 poor	3 fairly strong	3 weak	3 fair
1 barely aud.	1 extreme	1 extreme	1 extreme	1 unusable	4 strong	4 very weak	4 good
					5 very strong	5 none	5 very good

S = Signal strength. I = interference. N = noise.
P = propagation disturbance. O = Overall merit.

Example: 543 means a very strong signal with weak interference reducing the overall reception merit to good.

Electronic Tubes exclusively

**RECEIVING . TRANSMITTING
SPECIAL PURPOSE . CATHODE RAY**

Your best single source of supply for all name brands such as Raytheon, R. C. A., General Electric, Sylvania, Tungsol, Western Electric, Chatham, and etc.

Over 2000 different types of tubes always in stock.

Current and obsolete types in Klystrons, Magnetrons, Ignitrons, Thyratrons, rocket, T. R., Cathode ray, miniature and sub miniature tubes.

All of our tubes are guaranteed unconditionally to operate to your specifications. Every tube is tested before shipment.

Top quality tubes always at low prices.

Quality unsurpassed

— prices beyond

competition

The Amplidan Intercommunication Systems AS 340 and AS 340 A for up to and including 18 desk-sets are the newest and from a technical point of view most perfect types. Anybody can call and talk with anybody. Whenever a call has been effected visual as well as aural signals are given. An ordinary call to one specific extension takes place by depressing a button, a general announcement may be established in the same way.

All the desk-sets are provided with a blocking button that by depressing prevents incoming calls being effected. The desk-sets have also been equipped with a muting button for reduction of loudspeaker strength.

9 Transistor TRANS-OCEANIC

STANDARD AND SHORT WAVE PORTABLE RADIO

Smallest and lightest band-spread short wave portable ever produced

World Premiere!

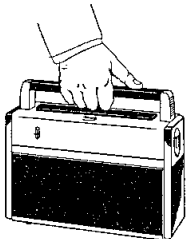

Here is the
ALL TRANSISTOR version
of the world-famed
Zenith Trans-Oceanic®
...the original short wave
portable radio

With hundreds of thousands of owners throughout the world, the original Trans-Oceanic Short Wave Portable has been tried, tested and proved for over 16 years. Companion to diplomats, world-travelers, explorers! Its list of owners reads like an International "Who's Who." Now, as a companion to this world-famed Trans-Oceanic, Zenith announces with pride the fabulous new **ALL TRANSISTOR** Trans-Oceanic Short Wave Portable Radio.

Engineered, Designed and Built in the United States of America

A complete world-wide "radio receiving station" in a sturdy, metal case finished in bright chrome and genuine Black Leather. 12½" wide, 10½" high, 4¾" deep. Approx. Wt. 13 lbs.

• **POWERED WITH 9 TRANSISTORS TO TUNE IN THE WORLD** ... Actually 92% more undistorted power output than any other tube type short wave portable! Performs in steel buildings, planes, automobiles, ship-to-ship and ship-to-shore.

• **BEAUTIFUL, REGAL, RUGGED** ... engineered as soundly as a shock-proof watch. Tropically treated to perform even in high jungle humidity.

• **3 BUILT-IN ANTENNAS** ... the handle itself telescopes to a vertical Waverod® Antenna for short wave reception. Wavemagnet® Antenna for local broadcasts. Another Wavemagnet Antenna is removable to attach to window in planes, trains, automobiles.

• **8 SUPER SENSITIVE BANDS** ... including International Short Wave, Standard Broadcast, Marine, Weather, Amateur Short Wave.

• **ROTARY BAND SELECTOR** ... spread-band, slide-rule dial. One knob tunes all 8 bands. Dialite for operation under poor lighting conditions.

• **NEW LOG CHART COMPARTMENT IN FRONT PANEL** ... lists major short wave stations in the world, with their frequencies and hours of best reception.

• **OPERATES ON LOW COST FLASH-LIGHT BATTERIES** ... available anywhere. Low cost transistor operation eliminates need for tubes, AC/DC power outlet and bulky "B" batteries.

QUALITY BY

Zenith

The Royalty of Radio

ZENITH RADIO CORPORATION, INTERNATIONAL DIVISION, CHICAGO 39, ILLINOIS

AIR EXTERNAL SERVICES PUBLICATIONS

For overseas listeners to the short-wave transmissions of All India Radio, **INDIA CALLING**, a monthly programme journal in English, provides a service of advance programme information supplemented by some of the best broadcast talks on life in India today. It is published in three illustrated editions — Eastern, Western and European.

For listeners in West Asia there are **IDHAT-EL-HIND**, published in Arabic and **SADA-E-HIND**, published in Persian. There are also programme bulletins for Burmese, Chinese and Tibetan speaking listeners.

The journals are supplied free of cost to listeners in foreign countries. Requests for them may be forwarded either through the Indian diplomatic missions or direct to

CBS

INTERNATIONAL

A Division of Columbia Broadcasting System, Inc., is pleased to announce its expansion into the field of television equipment as export department for the following prominent U. S. manufacturers:

ADLER ELECTRONICS

VHF/VHF, VHF/UHF translator transmitters; television relay systems

STANDARD ELECTRONICS

VHF television transmitters, VHF television amplifiers

FOTO-VIDEO LABORATORIES

Television studio equipment

JERROLD ELECTRONICS

Multi-outlet TV distribution equipment for apartments, hotels, schools

CBS International also exports the following items to all markets of the free world:

CBS radio and television picture tubes

CBS Columbia phonographs and records

CBS transistors, diodes, and semi-conductors of all types

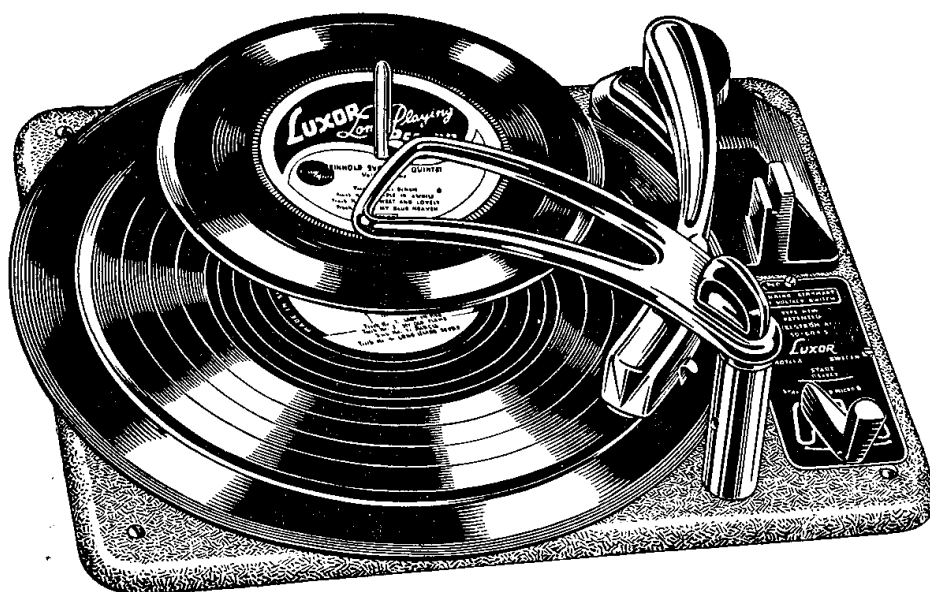

CBS magnetic recording tape.

CBS INTERNATIONAL

46 East 52nd Street, New York 22, New York
Cable Address: Columbine

INTERNATIONAL • FOR THE FINEST IN ELECTRONICS

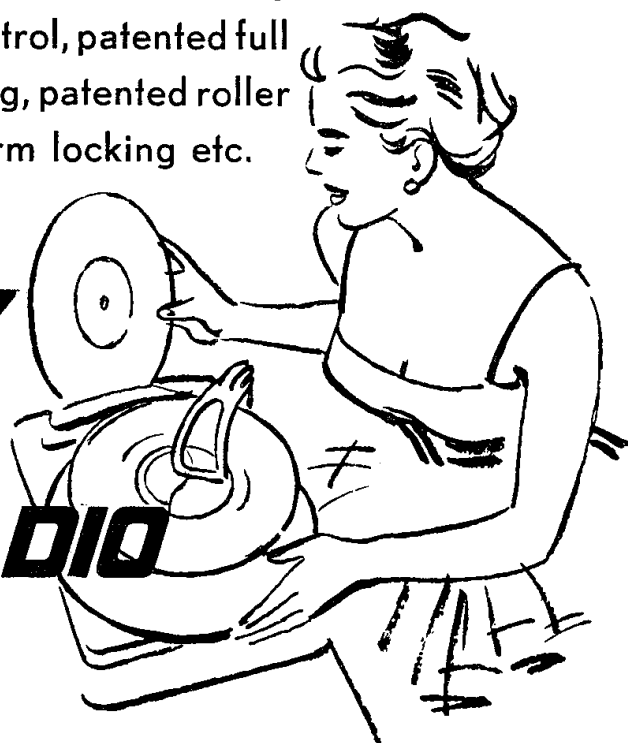

RT RECORD-CHANGER

New sensational all-speed version now available, incorporating previous amazing RT features: one lever control, patented full automatic needle-switching, patented roller pick-up, automatic tonearm locking etc.

The two columns below show the wavebands, which the BBC expects to use during the months from April to September and October to March. There will, however, be changes of both wavelengths and wavebands - sometimes of short notice - and listeners are advised to listen to announcements which will cover all such changes. Detailed wavelength information can be obtained from the prgr. journals.

Prgr. for Norwegians abroad: Sun.: Religious Sce., Sport, L.N. - Mo.: Sport N., L.N., Parliament N. - Tues.: Answers to letters from

Norway - Poland

listeners. L.N.-Wed.: Request Prgr. (music), L.N. - Thurs.: World N., L.N. - Fri.: Missionary N., L.N. - Sat.: Letter Box, L.N.
For Norwegian Seamen in the No. Atlantic and No. Sea:
Tromsø S.W. Tr. broadcasts daily the entire Home Sec. on 17755 kc/s.
ANN.: "This is Radio Norway with its short wave service for Norwegians abroad".
INF.-SIG.: Every s.w. transmission is introduced by the following theme, with originates from an ancient folk tune from Hallingdal;

Five minutes previous to every s.w. tr. the following signal is sent:

Message to our English-speaking audience: In our daily special prgrs. for Norwegians abroad we will usually have a section of Norwegian music or music presented by Norwegian artists. This musical section, which last 15 to 20 minutes, is introduced in English as well as in Norwegian. On Wed. and Sat. you can listen to our "Letter Box Programme", in which we play our listener's request records. We often receive letters from listeners in Norway with request to play a record with a greeting to one of their relatives abroad, but we regret to be unable to comply with these requests.

Every Sunday we have an additional programme in English, "Norway this week", in which we try to present Norway in different ways through music and feature programmes. We are very grateful for comments on our transmissions. Reports are answered by QSL-card. Return postage is not necessary. Our postal address is: RADIO NORWAY, Oslo, Norway.

PUB.: Programbladet (weekly).

NOREA RADIO (Nordic Radio Evangelistic Association).

The E. B. U. Bulletin

is the best and the most up-to-date of all international publications dealing with broadcasting and television.

It appears every two months.

ADMINISTRATIVE OFFICE OF THE E. B. U.
1, rue de Varembe GENEVA (Switzerland)

The REPORT (on short wave reception) and the REPORT (on medium and long wave reception) in the European broadcasting are published by the

TECHNICAL CENTRE OF THE E. B. U.
4, rue de la Vallée BRUSSELS (Belgium)

are the best documented and the most objective reports of this nature.

Le Bulletin de l'U. E. R.

est le mieux et le plus complètement renseigné de tous les périodiques internationaux de radiodiffusion et de télévision

Paraît tous les deux mois

OFFICE ADMINISTRATIF DE L'U. E. R.
1, rue de Varembe GENEVE (Suisse)

Les RAPPORTS d'ECOUTE (ondes courtes) (ondes moyennes et longues dans la Zone européenne de radiodiffusion)

édités par le

CENTRE TECHNIQUE DE L'U. E. R.
4, rue de la Vallée BRUXELLES (Belgique)
sont les plus documentés et les plus objectifs.

MOSCOW CALLING

What USSR broadcasts about

The Soviet Union covers a sixth of the globe. In order to travel through the country from west to east—from the Polish frontier to the Pacific coast—a passenger in an express train requires fourteen days. When the rising sun gilds the summit of Kljutjevskij in Kamtjatka, the inhabitants in the western areas are just going to bed. From the cold pole in Jakutsk, where the thermometer often registers 70 degrees below freezing point, to the hot desert of Karakum, where the temperature reaches 60 degrees (C), one meets the most various climatic conditions. The fauna and flora of the country are extraordinarily diverse. Its natural resources are unlimited.

The population of USSR exceeds 200 millions. There are Russians, Ukrainians, White Russians, Lithuanians, Gruzes and Moldavians—people of over sixty nationalities.

Moscow broadcasting station tells about life in this country, and transmits in 35 different languages.

The programmes comprise reports on sporting events, concerts, literary programmes. Listeners are informed about science and techniques, new books, theatre and film shows. Moscow broadcasting station also comments on the most important international events. There are special programmes for women, for children and for young people. In these programmes are given answers to letters from listeners and the records people have asked for; information is given concerning the life of Soviet Russian women, and about students and school children.

Foreign guests are broadcast over the Moscow station—political personalities from abroad, representatives of business circles, scientists, artists, people of different religions, workers, and peasants visiting the Soviet Union as tourists or as members of various delegations.

Moscow always replies to its listeners by radio and letter, sending them various souvenirs and prizes for participating in the competitions of the Moscow station.

read

HOW TO LISTEN
TO THE WORLD

World listening made easy by help of How to listen to the world. This companion to the WRH sets out to help all interested in world-listening to get the

best from their receivers, by giving hints and tips on short-wave reception. – It explains in simple language, illustrated by useful drawings and tables, how to set about finding, identifying and logging foreign stations and getting good results throughout the year.

Used in conjunction with the WHR, it will enable you to enjoy better, trouble-free radio, and at the same time increase your knowledge of the world at large.

Price: Dan. Kr. 4,50 - £ 0/4/6 - \$ 0,65 - DM 3,00 - plus postage

Order your copies now.

ARMED FORCES RADIO and TELEVISION SERVICE

ADDR.: Office of Armed Forces Information and Education, Washington 25, D.C.

This office exercises overall policy control of the Armed Forces Radio and Television Service. The mission of AFRTS is to keep U.S. men and women stationed outside the States the best informed service personnel in the world on current events. All broadcasts are in English. News, sports and other timely matter is beamed overseas directly by twelve powerful tr. on the U.S. Atlantic and Pacific coasts. These s.w. broadcasts serve the overseas radio stations, which rel. them locally. Prgrs. other than news and locally produced Prgrs. are derived directly from the U.S. Commercial Networks. N. is compiled directly from the wires of A.P., N.P. and JNS. AFRS presents regular s.w. prgrs. from both Los Angeles and New York City, using the transmitters of the V.O.A.

PRIVATE STATIONS

PRIVATE STATIONS: 1 August 1957, 3095 AM, 667 FM, 548 TV stations in actual operation.

EDUCATIONAL STATIONS (non comm.)

ADDR.: Office of Education, Washington 25. D. C. - **L.P.:** Chief Radio-Television: Dr. Franklin Dunham.

870 kc 50 kW WWL N.Orleans L. - 1030 kc 50 kW KWBU Corp. Chr., Te.

In operation 30 AM st., 140 FM st., 27 high power TV st., 250 closed TV circuits.

NATIONAL ASSOCIATION OF EDUCATIONAL BROADCASTERS: (NAEB.)

The national independent professional association, which since 1925 has represented the interests and needs of educational television and radio broadcasters, represents appr. 73% of the educational stations and production centers of the United States (appr. 90% exc. those identified as theological or religious st.).

Add.: Executive Office: 14 Gregory Hall, Urbana, Illinois.

L.P.: Pres.: Dr. B. Paulu. Vice Pres.: R. Hull. Exec. Dir.: Dr. Harry J. Skornia, Associate Dir.: E. H. Hill.

Stations: 129 educational institutions and organizations owning and operating a total of 136 educational radio and 26 educational T.V. stations: AM-stations: 23; FM-stations: 113; TV-stations 26.

Activities and Functions: The NAEB is the Association of American institutions operating educational, cultural and public sec. radio and T.V. st. and production centers. Its services include workshops, seminars, regional and national annual conferences, personnel-upgrading programs, engineering, legal, research and other operational consultant services, an employment agency, and numerous publications in radio and T.V., incl. a monthly Newsletter. It maintains an active production prgr. and has an exchange-advisory membership relationship with most national educational organizations. The NAEB also operates a radio network which duplicates via tape and distributes to member stations several hours of programming per week. At present there are some 70 stations in this network.

It also actively cooperates with various international organizations (European Broadcasting Union, Prix Italia, International University of the Air, UNESCO, etc.), and the national systems of various other countries (R. T. F., BBC, RAI and others), exchanging prgrs, publications and personnel with the broadcasting organizations of over 20 nations in Europe, Asia, Australia and Africa, as well as those in N. C. and So. America.

MUNICIPAL BROADCASTING SYSTEM (The city of New York).

Dir., Radio and Visual Services Division: Peter Aylen. Deputy Dir., R. and Visual Sces. Div.: F. Passigli. Chief Radio Sce.: G. L. Obhrai. Chief of Production: H. R. Van Stuwe. Chief of TV-Radio Operations: M. Hayward. Chief of T.V. Sce.: William S. Henson.

INTERVAL-SIGNAL:

ANN.: "This is the United Nations calling the Peoples of the World." This introductory phrase is used in all the official UN programmes in all of the languages concerned.

MESSAGE TO LISTENERS: The Radio Division is anxious to establish contact with as many listeners as possible and will gladly acknowledge all communications. All correspondents will receive a United Nations Radio Verification Card, new correspondents being sent a programme schedule and some general information about the United Nations and the Specialized Agencies. - Correspondence, requests for copies of the schedule of UN broadcasts should be ad-

1. VENEZUELA

The popular ballerina Jolanda Moreno in the television studio of Radio Caracas.

2. HAITI

The national operator and French and Creole radio pastor Jacques Mompremier at the studio microphone of Radio Station 4VEH.

3. BRAZIL

One of the most popular singers in Pernambuco, Jackson do Pandeiro. He is heard daily in the broadcasts from Radio Jornal do Commercio and is the best sold recordstar in Rio de Janeiro.

4. COLOMBIA

A typical artist in the studio of Nueva Granada.

5. VOICE OF AMERICA

View of Tape dubbing facilities at studios of the VOA in Washington D.C.

This equipment permits rapid reproduction on a mass basis of recordings, which may be played back at regular speed.

6. GREENLAND

Greenlandic children on their first schoolday in Godthaab.

SHORT WAVE MAGAZINE

(Established 1937)

One of the world's leading Amateur Radio publications covering transmission, reception, operating results, competitive working, design and construction. Regular features include "DX Commentary" and "VHF Bands", outstanding in their fields. Monthly, 56 pages. Subscription 33s. post free. 34 Danish Kr., 4.00 American dollars, 21.45 Swiss francs, 1650 French francs, 20 German Dm., 2885 Italian lire.

SHORT WAVE MAGAZINE LTD.,

55, Victoria Street, London S.W.1, England.

WORLD TELEVISION

The principal television systems:

Definition refers to the broadcast standard which is normally stated in terms of the number of lines which make up the image. Reference in the following surveys is made throughout merely to 405 lines, 525 lines, 625 lines (CCIR*), 625 lines (Sovjet**) and 819 lines respectively. Details of these five definitions are given in the following table:

	405	525	625*	819
Number of lines per picture	405	525	625*	819
Video bandwidth (Mc/s)	3	4	5	10.4
Channel width (Mc/s)	5	6	7	14
Sound carrier relative to vision carrier (Mc/s)	÷ 3.5	+ 4.5	+ 5.5	÷ 11.15
Sound carrier relative to edge of channel (Mc/s)	0.25	÷ 0.25	÷ 0.25	+ 0.10
Interlace	2/1	2/1	2/1	2/1
Line frequency (c/s)	10.125	15.750	15.625	20.475
Field frequency (c/s)†	50	60	50	50
Picture frequency (c/s)	25	30	25	25
Sense of vision modulation	Positive	Negative	Negative	Positive
Level of black as percentage of peak carrier	30	75	75	25
Sound modulation	AM	FM	FM	AM

*) The International Radio Consultative Committee.

**) The characteristics are the same as 625 lines CCIR exc. for a difference in bandwidth: video bandwidth 6 Mc/s, channelwidth 8 Mc/s, sound carrier relative to vision carrier +6.5 Mc/s.

Channel No.	Vision carrier Mc/s	Sound carrier Mc/s
A-2	55.25	59.75
A-3	61.25	65.75
A-4	67.25	71.75
A-5	77.25	81.75
A-6	83.25	87.75
A-7	175.25	179.75

A-35	597.25	601.75
A-36	603.25	607.75

The following pages give you the data of the different TV stations of the world. The channel is indicated by a letter followed by a figure. The letter indicates the technical data of the systems which are in use (A: American, B: British etc.) and the figure is the channel number.

The powers for vision and sound are indicated by a fraction, the numerator indicating the number of kW (ERP) for vision and the denominator for sound, for example 6/1.5 means vision. 6 kW ERP and sound 1.5 kW ERP.

B: British standards:

Sound: Amplitude mod.

Vision: Positive mod.

Number of lines: 405.

Frame frequency: 25 c/s.

Ch. width: 5 Mc (Ch. 1 7 Mc).

B-1	45.00	41.50
B-2	51.75	48.25
B-3	56.75	53.25
B-4	61.75	58.25
B-5	66.75	63.25
B-6	179.75	176.25
B-7	184.75	181.25
B-8	189.75	186.25
B-9	194.75	191.25
B-10	199.75	196.25
B-11	204.75	201.25
B-12	209.75	206.25
B-13	214.75	211.25

E: European system:

Sound: Frequency mod.

Vision: Negative mod.

Number of lines: 625.

Frame frequency: 25 c/s.

Channel width: 7 Mc/s.

(ch. 1 only 6 Mc/s).

E-1	41.25	46.75
E-1A	42.25	46.75
Channel carrier	Vision	Sound
E-2	48.25	53.75
E-2A	49.75	55.25
E-3	55.25	60.75
E-4	62.25	67.75
E-4A	82.25	87.75
E-5	175.75	180.75
E-6	182.25	187.75
E-7	189.25	194.75
E-7A	192.25	197.75
E-8	196.25	201.75
E-8A	201.25	206.75
E-9	203.25	208.75
E-10	210.25	215.75
E-11	217.25	222.75

F: French standards:

Sound: Amplitude mod.

Vision: Positive mod.

N. of lines: 819 (ch. FI: 441)

Frame frequency: 25 c/s.

Channel width: 13, 15 Mc/s

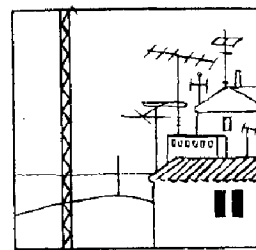

(ch. 1: 7.6 Mc, ch. 8: 14 Mc).

F-1	46.00	42.00
F-2	52.40	41.25

★ GERMANY ★

GERMAN FEDERAL REPUBLIC

Television has been developed by the various radio organizations (Rundfunkanstalten) and especially the Nord- and Westdeutscher Rundfunk. - A common prgr. is being broadcast throughout Germany under the title »Deutsches Fernsehen«. Each of the organizations participates in the production of this prgr. In addition a number of regional broadcasts are transmitted by each of the broadcasting organizations. Relay Facilities for the German television network are constructed by the German postal authorities: The network consists of 50 relay stations (Dezimeter, directional); the main-connections are: Hamburg - Köln - Feldberg Taunus - Frankfurt - Stuttgart - Baden-Baden - München. Seven broadcasting organizations have 22 transmitters and ten frequency-changers (low power transmitters without Dezimeter-connection with the German network). Five border-stations are used for foreign program-exchange.

Community television prgr. daily approx.: W.: 17.00-18.00, 19.00-22.00. Sun. additionally 12.00-12.30 and longer afternoon-programmes in case of sport-events. Testtransmissions approx.: 09.00-18.45 (each station has different times).

★ UNITED STATES ★

ADDR.: Dept. of Health, Education and Welfare, Office of Education Washington 25, D.C. - L.P.: Franklin Dunham, Chief of Radio.

EDUCATIONAL:

Approx. 500 commercial TV stations carry educational prgrs. during free periods and many comm. sponsored educational prgrs. appear on TV regularly. 256 television channels has been reserved by F.C.C. for the use of non-commercial educational stations. Twenty-seven such stations are now in operation, mainly in the large cities and at university centers. They are of three types: 1) Community stations supported by voluntary funds; 2) university stations supported by State and local budgets; 3) State-owned networks covering entire divisions of the country supported entirely by taxation. The States having this type of operation are all located in the Southern areas. - An interesting development for educational purposes is now to be found in closed-circuit TV, limited to universities and to individual school systems. A prgr. sec. known as the Educational Television and Radio Center located at Ann Arbor, Michigan supplies 10 hours per week of educational TV prgrs. to the present stations and, in addition, distributes through the University of Indiana its prgrs. to both closed-circuit and film projectors which are in use in approx. 2500 schools in the Nation. - There are 50 additional non-comm. educational stations

in process of being organized which will eventually reach a potential audience of 100 million people. The present network of 27 stations now serves an audience of 40 million people in a country whose population is growing at the rate of one million people per year and now stands at 172 million.

THE ARMED FORCES RADIO & TELEVISION SERVICE
AFRTS operates an experimental TV station at Limestone, Maine, USA. AFRTS operates TV-stations in Alaska, Azores, Eritrea, Tripoli, Saudi Arabia, Okinawa, Bermuda, Eniwetok, Guam, Cuba, Canal Zone, Philippine, Ryukyu Isl., Iceland. (low power ch. A8).

COMMERCIAL: 219 commercial TV stations.

American Broadcasting Co. TV: Owned stations WABC, WBKB, KABC, KGO, WXYZ.

★ STANDARD FREQUENCY STATIONS ★

L.T.: WWV GMT ÷ 5 h. WWVH ÷ 10 h. - L.: English.

R. STATION WWV AND WWVH (Go.)

ADDR.: Nat. Bureau of Standards, Boulder Laboratories, Boulder, Colorado, USA. - WWV: Box 182, Route 2, Lanham, Maryland. - WWVH: Box 901, Puunene, Maui, T.H. - L.P.: Dir. Tec., WWV: Fr. Sera. Dir. Tec., WWVH: S. Katahara.

STATIONS:

WWV: 2500 kc/s 120 m 1 kW - 5000 kc/s 60 m 10 kW - 10000 kc/s 30 m 10 kW - 15000 kc/s 20 m 10 kW - 20000 kc/s 15 m 1 kW - 25000 kc/s 12 m 0.1 kW.

WWVH: 5000 kc/s 60 m 2 kW - 10000 kc/s 30 m 2 kW - 15000 kc/s 20 m 2 kW. - WWV and WWVH broadcast continuously night and day standard radio freq., standard audio freq., standard time intervals, t.s. and radio propagation disturbance warnings. WWVH is interrupted 4 minutes after each h. and half h. and 34 minutes beginning at 19.00 UT each day.

ANN.: "National Bureau of Standards, WWV, when the tone returns Eastern Standard Time is ... AM or ... PM". - V. by QSL-card or letter. - PUB.: Prgr. sched. on request.

NATIONAL PHYSICAL LABORATORY (Go.)

ADDR.: Teddington Middlesex, Gt. Britain.

MSF STANDARD FREQUENCY SERVICE:

kc/s	m	kW	kc/s	m	kW
60	5000	10	14.29-15.30	5000	60
2500	120	0.5	-	10000	30

*) exc. for break in transm. from 15-20 minutes past each h.

ANN.: Call sign three times in slow Morse. "This is MSF, Rugby England transmitting carrier and modulation frequencies within 2 parts in 108 of nominal on 2500, 5000 and 10000 kc/s". - V. by letter.

ROYAL GREENWICH OBSERVATORY

ADDR.: Time Dep., Herstmonceux Castle, Hailsham Sussex, England. The international time signals of the Royal Greenwich Observatory are radiated as follows: 10.00 & 18.00: 19.6 kc/s, 12190/17685 kc/s.

TIME SIGNALS FROM DOMINION OBSERVATORY, CANADA

ADDR.: Dominion Observatory, Ottawa, Ontario. - L.P.: Dominion Astronomer: Dr. E.S. Beals. Dir. Time Sec.: M. M. Thomson.

STATIONS: CHU 3330 kc/s 90.09 m 0.3 kW - 7335 kc/s 40.90 m 3 kW 14670 kc/s 20.45 m 0.3 kW. - D. PRGR.: 24 h. a day. - ANN.: Hours and minutes announced during the last 10 seconds of each minute: "Dominion Observatory, Canada, Eastern Standard Time ... hours ... minutes". - V. by QSL-card. - PUB.: Prgr.-sched. free on request

STATION JYJ

ADDR.: R. Research Laboratories, 13-6 chome, Iguirã, Azabu, Minato-ku, Tokyo, Japan.

Standard Freq. & Time Signals:

2500 kc/s	2 kW	06.59-22.59	10000 kc/s	2 kW	24 h. a day
5000	-	2	24 h. a day	15000	-
				2	24 h. a day

The st. is off the air every 29-39 minute of the hour. - V. by QSL-card.

STATION LOL

ADDR.: Observatorio Naval del Ministerio de Marina Costanera Sud, Buenos Aires. - L.P.: Dir. Gen.: A. Acevedo. Dir. Tec.: A. Ricart.

Standard Freq. and Time Signals: LOL:

5000 kc/s	2 kW	10000 kc/s	2 kW	15000 kc/s	2 kW.
-----------	------	------------	------	------------	-------

D. on all freq.: 11.00-03.00. Has YGY alert calls each 4 1/2 resp. 34 1/2 minute after full hour.

K O D A K Q U A L I T Y

Kodak products are famous all over the world thanks to a well-known scientific and industrial organization in constant development since 1888, including Research and Testing laboratories which have no match anywhere.

You would buy a Kodak camera or film on trust, as you have every assurance of top quality. For the same reason, you will also pin your faith to Kodavox Magnetic Tape.

Kodavox Magnetic Tape is sold throughout the world by Kodak Houses and Distributors. Please contact these companies or apply to:

KODAK-PATHÉ-Export Department, 37, av. Montaigne - PARIS 8^e for any information regarding our distributing organization.

Kodavox Magnetic Tape

6,3 mm (1/4 in.)

*It's a Kodak product
it speaks for itself*

STANDARD TYPE
